

Balustrades with 4-colour printing

Clear Hammerglass sheets with photographic four-colour printing for multifunctional balustrade solutions.

Advantages

- Half the weight of ordinary glass
- No glass breakage, splinter-free
- The panels are made to measure after a post system or the like has been assembled
- Ready-made solutions for fixing and installation

Design and installation

Hammerglass mounted on a post system. Photos can be laminated between two 6 mm Hammerglass panels, to be protected against vandalism and the sun's UV rays. The edges are sealed to prevent water and contamination between the panels. Bring us into your discussions at the idea stage. Our designers will prepare drawings and offer suggestions for functional solutions. We will be happy to provide tenders for complete projects: Made-to-measure Hammerglass, posts, fixing systems and installation.

Draft regulatory text

"The panels shall be made from 12 mm chemical-resistant (must withstand acetone), hard-coated polycarbonate offering at least 99.96% UV protection, type Hammerglass."

Technical specifications

Max Hammerglass dimensions for lamination: 2000 x 2000 mm
Hammerglass thickness: 2 x 6 mm
