

## Care instructions

Hammerglass® is coated with a very hard surface layer of silicone oxide. Just like ordinary glass it is highly recommended not to use sharp tools or objects that can cause scratching when cleaning.

### Cleaning

As basic cleaning agent, a solution of lukewarm water with a mild household detergent is recommended. Use only soft micro fibre cloths/soft sponges or rubber window scrapers free from harsh abrasives. Graffiti can be removed with solvent products as isopropanol or white spirit. Acetone should be avoided.

### Anti-static treatment

In common with all plastic materials, Hammerglass® tends to build up a static charge. If needed, we recommend to wipe off the screen with a solution of regular fabric softener and water, immediately after installation.

### Weather conditions

Exposure to weather and wind will not cause Hammerglass® to lose its impact strength, within a period of 10 years from the date of purchase. Hammerglass® will not show any discolouration or surface damage caused by weather conditions, within a period of 5 years from the date of purchase.

If Hammerglass® is in any way affected, please contact our dealer or Hammerglass AB directly.
